

ABSTRACT

A headrest main body (3) comprises a bracket (13) for rotatably supporting the headrest main body (3) to a connection section (5) of a stay (2), a
5 pad (6) made of a foaming material covering the bracket (13) and the connection section (5) of the stay (2), and a skin (7) covering the pad (6). The skin (7) is mounted with recesses (9a, 9b) each for receiving a bend section (8) that connects a stay main body (4a, 4b) to the connection section (5) of the stay (2). Further, side
surfaces (12a, 12b) of the recesses (9a, 9b) are mounted with receiving ports (10a,
10 10b) for receiving the connection section (5) of the stay (2) into an interior of the headrest main body (3).
